Rhushikesh Nandodkar

💼 Fresher | 📱 (+91) 7620722083 | ✉ rhushikeshnandodkar2003@gmail.com

Key skills

- Django Rest API
- React.js
- Figma
- Typing Speed
- Python
- Machine Learning
- Node.js
- generative ai
- Computer Vision
- Natural Language Processing
- Tensorflow
- Pytorch

Personal Information

City **Pune**

Country **INDIA**

Hobbies

- singing
- playing guitar
- Skething Portraits

Languages

- English
- Hindi

Profile Summary

🪶 Aspiring AI Engineer | Full-Stack Developer | Machine Learning Enthusiast

I am a full-stack developer and AI enthusiast with expertise in Django, React.js, and machine learning. With over three years of experience, I have built multiple SaaS platforms, AI-powered solutions, and automated business workflows

Education

B.Tech/B.E., 2023

Sinhgad College of Engineering, Pune

Internship

31 Days

Cad & Cart

Karmacts systems

Projects

60 Days

Consulthub website for connecting consultants with people who are looking for guidance

Consulthub is startup on which i have worked as full stack developer. I have developed whole system with authentication online booking and other services. I used mainly django rest and reactjs for this project. And also integrated google api for login. Also i have designed UI for this system using figma

62 Days

Web based automation software for cap manufacturing company

I developed a custom software solution for a cap manufacturing company, aimed at automating their workflow and improving operational efficiency. Utilizing Django REST APIs, I built a robust backend system that streamlined various processes, including inventory management, order processing, and production scheduling

🔖 Extra curricular

AI-Powered Product Chatbot System

Tech Stack & Implementation:
Built an AI-powered system that enables users to register products, upload manuals, and generate chatbots for customer support. Integrated RAG (Retrieval-Augmented Generation) for efficient LLM communication.
✔ Backend: & Node.js for API handling and authentication.
✔ Frontend: for UI with state management via React Hooks.
✔ Vector Database: FAISS for semantic search in product manuals.
✔ LLM Communication: RAG-based retrieval using & LLM.
✔ File Upload: Supports PDF/DOCX manual uploads with validation.

2 Weeks

AI-Powered Relevancy Finder for Online Classes

Tech Stack & Implementation:
Developed an AI-driven system for online classes that analyzes live comments, finds their similarity with class content, and provides a dashboard for tutors showcasing the most frequently asked questions. Built during a 24-hour hackathon.
✔ Backend: Django with Django Channels for real-time processing.
✔ Custom Model Training: Built a classification model to categorize questions.
✔ Deep Learning: LSTM-based model for text sequence analysis.
✔ Semantic Similarity: Utilized Sentence Transformers for similarity detection.
✔ Dashboard: Displays top queries for tutors with insights.
